COMPANY PROFILE

High-tech enterprise specializing in R&D and production of enclosures and cabinets

People-oriented, pioneering innovation, and surpassing oneself

Hebei Qianfeng Electronics Enclosure Equipment Co., Ltd. Located in Qingxian, Cangzhou, Hebei Province, established on May 14, 2011, covering an area of 4,000 square meters. The company emphasizes details, strives for excellence, always prioritizes customer needs, and is committed to contributing more high-quality and practical products to society.

13

Sheet metal processing

100+

Serving regions

10000+

Manufacturing parts

200+

Partners

After years of development, we provide high-quality, high-performance product solutions for customers with strong technical strength and advanced production equipment, widely applied in various fields. Keeping pace with the times, we launched a series of innovative products, such as multimedia educational podiums and multifunctional control consoles, which have received high praise.

QIANFENG

CORE VALUES

QIANFENG

MISSION & VISION

- People-oriented: Respecting employees, focusing on talent development and team growth.
- Innovation: Continuously pursuing technological innovation and product upgrades to meet market demands.
- Surpass oneself: Encouraging employees and the company to grow together, constantly challenging themselves, and pursuing excellence.
- Quality first: Upholding quality standards, carefully crafting each product, and building an outstanding brand.
- Customer-first: Understanding customer needs in depth, providing customized solutions, and achieving customer satisfaction and loyalty.
- Contributing to society: Actively assuming social responsibility, creating value for society through high-quality products and services.

CONTRIBUTING TO SUSTAINABLE DEVELOPMENT

- Mission: Providing high-quality enclosure and cabinet products with strong technology and advanced equipment to multiple industries, driving modernization.
- Vision: To be the leader in the enclosure and cabinet industry, leading innovation and development, winning global customer trust and praise with excellent products and services, and making a positive contribution to society.

QIANFENG

DEVELOPMENT HISTORY

02

STARTUP PHASE

Founded and Development (Established in 2011)

Hebei Qianfeng Electronics Enclosure Equipment Co., Ltd. was established in Qing County, Cangzhou City, Hebei Province. It was initially dedicated to the production and construction of chassis and cabinets. The company established the business philosophy of "quality first, customer first" in its early days and quickly gained market recognition.

Product R&D

In order to meet the diverse needs of customers, the company has launched a series of chassis and cabinet products with superior performance, laying a solid foundation for subsequent development.

RAPID GROWTH

Technology Upgrades and capacity Expansion

As market demand continues to grow, the company has gradually expanded production scale, introduced advanced automated equipment to optimize processes, and improved product quality and production efficiency. Meanwhile, by enhancing its quality management system, the company has obtained multiple international quality certifications, further boosting product market competitiveness.

Expanding Product Line

On the basis of stable chassis and cabinet products, the company continues to expand its sheet metal processing business to meet the needs of customers in multiple industries such as industry, communications, and energy.

BRAND BUILDING AND MARKET EXPANSION

Domestic Market coverage

The company has established a complete sales network covering major regions across the country, and its products are widely used in various industrial and commercial fields.

International market layout

With globalization accelerating, the company formulated an international expansion strategy, participated in overseas exhibitions to explore markets in Europe, America, Southeast Asia, the Middle East and Africa, and established partnerships with many global renowned firms.

CONTINUOUS INNOVATION AND SUSTAINABLE DEVELOPMENT

Technological innovation

The company improves the level of automation and intelligence, develops more sheet metal processing products that meet market demand, and maintains its leading position in the industry.

Environmental Protection and Social Responsibility

The company is committed to fulfilling its social responsibilities, actively practicing environmental protection concepts, optimizing production processes to reduce environmental impact, and promoting green manufacturing.

FUTURE OUTLOOK

Looking Forward

Hebei Qianfeng Electronics Enclosure Equipment Co., Ltd. We will continue to adhere to technological innovation and brand development, deepen our international strategy layout, and strive to become a global leading provider of sheet metal processing solutions. We will return better products and services to our customers and society, achieving the sustainable development of the company.

SURFACE TREATMENT

03

Chemical Nickel
Plating

Chemical plating is a process where a nickel layer is deposited onto a metal surface through a chemical reaction without the use of electrical current. It is commonly used to enhance the corrosion resistance, hardness, and wear resistance of metal surfaces.

Spraying
(Painting)

Spraying involves evenly applying a coating onto the metal surface to form a protective film. Common coatings include paint, epoxy resin, polyurethane, and acrylic.

Hot
Dip Galvanizing

Hot dip galvanizing involves immersing steel in a molten zinc bath to form a zinc layer on the surface, improving the corrosion resistance of the steel. The thickness of the galvanized layer typically ranges from 50 to 100 microns.

Anodizing

Anodizing is an electrochemical process that forms a protective oxide layer on the surface of aluminum and aluminum alloys. The thickness of the oxide layer is typically between 5 to 20 microns. The oxide layer not only enhances the corrosion resistance of aluminum but also improves its appearance.

Carburizing

Carburizing is a heat treatment process in which carbon atoms penetrate the surface of steel at high temperatures, improving its surface hardness and wear resistance.

Phosphating

Phosphating is a process where the metal surface reacts with a phosphate solution to form an inorganic phosphate protective film. It is commonly used for rust prevention on steel materials.

Passivation

Passivation treatment is usually the process of exposing the metal surface to an oxidizing agent to form a stable oxide film, commonly used in stainless steel surface treatment.

Electroplating

Electroplating is a process that involves depositing metal ions onto the substrate surface through an electrochemical reaction, using plating metals such as nickel, chromium, zinc, gold, silver, etc.

Sandblasting

Sandblasting uses high-speed air flow to spray sand particles onto the metal surface, creating a rough texture. It is commonly used to clean rust, oil stains, etc., from the metal surface.
