

IH Chemical Centrifugal Pump ++

+ Product Introduction +

The IH chemical centrifugal pump is a single-stage, single-suction, corrosion-resistant centrifugal pump designed to international standards, featuring a compact structure, stable performance, and efficient operation. With stainless steel flow passage components, it effectively transports corrosive media such as acids, alkalis, and salts, and operates over a wide temperature range. Widely used in industries such as chemical, petroleum, metallurgy, pharmaceuticals, and papermaking, it is an ideal general-purpose pump for conveying clean or slightly particulate-laden liquids in chemical processes.
