

+ IH/IS horizontal centrifugal pump

+ Product Introduction +

The IH/IS horizontal centrifugal pump is a single-stage, single-suction horizontal centrifugal pump featuring a compact structure, smooth operation, and high efficiency. The IH model is primarily designed for conveying corrosive media such as acids and alkalis, with stainless steel wetted components. The IS model is suitable for conveying clear water or liquids with similar physical and chemical properties. Both pumps are widely used in the chemical, petroleum, metallurgy, electric power, and papermaking industries, making them ideal for industrial conveying.
