

G-type gravel pump

GRAVEL PUMP

Product Overview

The G-type gravel pump is a heavy-duty horizontal centrifugal pump specifically designed for conveying large particles, high concentrations of gravel, and highly abrasive media. This pump features a robust structure, a wide flow channel that is not easily clogged, and the ability to stably convey media containing sand, gravel, and slurry. The entire unit incorporates a wear-resistant design, ensuring reliable operation and suitability for continuous high-load conditions. It is widely used in river dredging, sand mining, mining, and port engineering.
